Dear Members,

I have devoted this edition of our newsletter to printing a list of *Prostanthera* and *Westringia* in the hope that members will find it easier to:

- 1) Request cutting material by sending a list including name of species, location and number;
- 2) Be able to send material of any species or form not in the following list so as to build up the central collection;
- 3) Be able to know what they are growing by numbering all specimens on a permanent tag. It is then a simple process to refer back to this list.

The following list contains most of the *Prostanthera* and *Westringia* forms and species that I have growing.
